IOAG-13 Resolutions

R-13-1: IOAG resolves to approve both:

- the goals and approach presented by the Space Internetworking Strategy Group (SISG) for the development of the Operations Concept document; and,
- the proposed modifications of the SISG work plan which anticipates publication of the Operations Concept, the Service Catalog #2, and the requirements documents in draft 0 version in May 2010.

IOAG further resolves to transmit a liaison statement to the Consultative Committee for Space Data Systems (CCSDS) asking that it assume responsibility for producing the Solar System Internetwork (SSI) Architecture Definition Document (in response to the SSI Operations Concept to be delivered in May 2010) in time for the third Inter-Operability Plenary (IOP-3) anticipated not earlier than first quarter of 2011.

R13.2: The IOAG resolves to thank Mrs. Loredana Bruca for her involvement and dedicated support to the IOAG community and wish her the best in her future endeavors.

R13.3: The IOAG resolves to thank the Italian Space Agency (ASI) for its hospitality, and for the excellent arrangements and accommodations that were provided in support of the IOAG-13 meetings.
